

Customer Journey Map – AI-Powered Customer Support Ticketing System

Scenario: Customer raises a support request using an AI-powered ticketing system.

Journey Steps:

1. Visit support portal
2. Describe issue to AI chatbot
3. AI creates and categorizes ticket
4. Ticket assigned to support agent if needed
5. Issue resolved and customer notified
6. Customer provides feedback and ticket closes

Goals & Motivations: Quick resolution, accurate answers, easy tracking.

Interactions: Website, mobile app, AI chatbot, email/SMS notifications, support agent.

Positive Moments: Instant acknowledgement, 24/7 availability, fast updates.

Negative Moments: Complex issues need escalation, delayed responses, incorrect AI understanding.

Areas of Opportunity: Better AI accuracy, multilingual support, proactive updates, personalized assistance.
